

Table 1:  $P(Z < z)$  where  $Z \sim N(0, 1)$  for values of  $z$  between 1.00 and 3.99. One reads the table as  $P(Z < z) = p_{r,c}$ , where  $z = z_r + z_c$  and  $z_r$  are the first two digits of  $z$  shown in row  $r$ ,  $z_c$  is the third digit of  $z$  shown in column  $c$ , and  $p_{r,c}$  is the  $(r, c)$ th entry. For example,  $P(Z < 1.02) = 0.8461$ , looking in row labelled 1.0 and column labelled 0.02.

Table 2: Values of  $t$  for  $P(T < t)$ , where  $T$  has Student's  $t$ -distribution with  $\nu$  degrees of freedom, for  $\nu \in \{1, 2, \dots, 30\}$ . In this table,  $P(T < t_{\nu,p}) = p$ , where  $\nu$  is the  $\nu$ th row,  $p$  is the column with heading  $p$ , and  $t_{\nu,p}$  is the corresponding entry in the table. For example,  $t_{3,0.60} = 0.277$ , looking in row labelled 3 and column labelled 0.60.
